Keynote lectures

River networks as ecological corridors for species, populations and pathogens of water-borne disease <i>A. Rinaldo</i>	3
River turbulence: Current state, challenges, and prospects <i>V. Nikora</i>	5
Climate and human forcing of Alpine river flow <i>S.N. Lane, M. Bakker, D. Balin, B. Lovis & B. Regamey</i>	7
A sediment journey through the Bermejo River of Argentina and Bolivia: From debris flows to meandering, ending in washload <i>M.H. Garcia</i>	17

A River hydrodynamics

A.1 Turbulent open-channel flow and transport phenomena

Measurement of mass exchange between a main flow and an adjacent lateral cavity <i>W. Cai, M. Brosset, E. Mignot & N. Riviere</i>	23
Entrainment mechanisms in river embayments <i>Y. Akutina, S.J. Gaskin & L.B. Mydlarski</i>	31
Three-dimensional turbulent structure and spatial distribution of tractive force in open channel flow with side-overflow <i>N. Yamashita & T. Ohmoto</i>	39
Streamwise vorticity generation in a compound meandering channel <i>I. Mera, J. Anta & E. Peña</i>	47
Experiments on two consecutive open channel bends <i>A. Farhadi, M. Tritthart, M. Glas & H. Habersack</i>	55
Vortex interaction in patches of randomly placed emergent cylinders <i>A.M. Ricardo, S. Di Carlo, M.J. Franca, A.J. Schleiss, P.M. Sanches & R.M.L. Ferreira</i>	63
Surface velocity divergence in open-channel flows with strip roughness <i>M. Sanjou, T. Okamoto, Y. Tanaka & K. Toda</i>	71
Transition from permeable to impermeable beds and vice versa in open channels: Effects on the velocity distribution of turbulent flow <i>G. Pechlivanidis, E. Keramaris & I. Pechlivanidis</i>	81

Laboratory experiments and shallow water simulations of gravity currents moving on flat and up-sloping beds	89
<i>C. Adduce, V. Lombardi, G. Sciortino, M. La Rocca & M. Morganti</i>	
Investigation of the turbulent boundary layer and associated energy dissipation in an open channel flow behind a series of regular grids	97
<i>T.A. Earl, S. Cochard, L. Thomas & L. David</i>	
Effect of spatial average on turbulence measurement	107
<i>D. Li, Q. Lin, J. Zhuang & X. Wang</i>	
Experimental characterization of the near-wall turbulence in rough supercritical flows	111
<i>E. Carvalho, R. Maia, R. Aleixo & R. Ferreira</i>	
Mechanical model for velocity profile and flow resistance	119
<i>G. Smart</i>	
Investigation of the impacts of coherent flow structures upon turbulence properties in regions of fluvial scour	127
<i>H. Maity & B.S. Mazumder</i>	
Numerical modeling of complex solid-fluid flows with meshless methods	133
<i>R.B. Canelas, R.M.L. Ferreira, A.J.C. Crespo & J.M. Domínguez</i>	
A new immersed boundary method for simulating free-surface flows around arbitrary objects	141
<i>X. Liu</i>	
Dispersion of a passive scalar in turbulent open channel flow	147
<i>S. Bomminayuni, T. Stoesser & N. Ruether</i>	
Spatial development of a constant-depth shallow mixing layer in a long channel	155
<i>Z. Cheng & G. Constantinescu</i>	
Prediction of compound channel secondary flows using anisotropic turbulence models	163
<i>M.S. Filonovich, L.R. Rojas-Solórzano & J.B. Leal</i>	
Flow in compound open-channels: Investigation of small-scale eddy viscosity variability using a Smagorinsky turbulence closure model	171
<i>C. Pham Van, E. Deleersnijder, D. Bousmar & S. Soares-Frazão</i>	
Numerical study on secondary currents of the second kind in wide shallow open channel flows	179
<i>R. Suzuki, I. Kimura, Y. Shimizu, T. Iwasaki & T. Hosoda</i>	
Large Eddy Simulation of gravity currents moving on up-sloping boundaries	189
<i>L. Ottolenghi, C. Adduce, R. Inghilesi, F. Roman & V. Armenio</i>	
Density current propagation in a tidal river	197
<i>M.R. Soliman, S. Ushijima & S. Kantouch</i>	
Modeling of the spread of thermal pollution in rivers with limited data	205
<i>M.B. Kalinowska & P.M. Rowiński</i>	
Simple depth-averaged model considering deformation of velocity distribution for hydraulic jump and bore	213
<i>T. Hosoda & M.N. Langhi</i>	
In situ measurement of advection-dispersion processes in a torrential river, comparison with numerical modeling	221
<i>A. Hauet, G. Buannic, G. Antoine, M. Jodeau, M. Esteves & F. Thollet</i>	
Discharge distribution and salt water intrusion in the Rhine-Meuse river delta network	229
<i>N.E. Vellinga, M. van der Vegt, A.J.F. Hoitink & P. Hoekstra</i>	
Two-dimensional hydrodynamic model of the St. Lawrence fluvial estuary	235
<i>P. Matte, Y. Secretan & J. Morin</i>	
Experimental investigation of a propeller jet induced velocity field	241
<i>P. Nardone, P. Geisenhainer, Ka. Koll & C. Di Cristo</i>	

A study in hydraulic performance indices for sediment retention ponds <i>A. Farjood, B.W. Melville & A. Y. Shamseldin</i>	251
On the re-aeration coefficient in channels of complex shape <i>S.G. Wallis, J.R. Manson & B.O.L. Demars</i>	259
Prediction of velocity profile in river bends: A hydraulic geometry approach <i>S. Fasihi, E. Karrabi & J. Attari</i>	265
<i>A.2 Bed roughness and flow resistance</i>	
Direct measurement of river-bed form resistance in rivers with sand waves <i>Y. Motonaga, A. Yorozuya, Y. Iwami & M. Yamasaka</i>	273
Near-bed flow over a fixed gravel bed <i>H. Friedrich, S.M. Spiller & N. Rütther</i>	279
Roughness parameters in shallow open-channel flows <i>O. Eiff, E. Florens & F.Y. Moulin</i>	287
Roughness coefficient determination and fine scale flow field characterisation of fish baffles in HDPE slip lined culverts <i>J. Duguay, R.W.J. Lacey, E. Jaillet & F. Floriani</i>	293
Shallow gravel-bed river flows: The behaviour of the free surface and the flow information contained within <i>A. Nichols, K.V. Horoshenkov & S.J. Tait</i>	301
Assessing surface DEM and roughness with a 3D-printed gravel bed <i>S. Bertin, H. Friedrich, P. Delmas, E. Chan & G. Gimel'farb</i>	311
Turbulent flow over fast moving dunes: Improved method for studies in natural streams <i>J. Krick & A. Sukhodolov</i>	321
Simulation of the free surface and flow velocity in depth-limited flows over rough beds <i>E. Gabreil, S. Shao & S. Tait</i>	327
A numerical calculation method for flow in the presence of isolated boulders atop a rough bed by using an enhanced depth integrated model with a non-equilibrium resistance law <i>T. Uchida, S. Fukuoka, A.N. Papanicolaou & A.G. Tsakiris</i>	335
Sphere drag revisited using Shuffled Complex Evolution algorithm <i>R. Barati, S.A.A. Salehi Neyshabouri & G. Ahmadi</i>	345
Field measurements of mean velocity and boundary shear stress with an acoustic Doppler current profiler <i>J. Petrie, P. Diplas, M. Gutierrez & S. Nam</i>	355
Stage discharge prediction for highly sinuous meandering channels <i>S.S. Dash & K.K. Khatua</i>	361
Bathymetric changes, roughness and conveyance of a compound, regulated by groynes river channel during low and high water conditions <i>R. Banasiak, M. Krzyżanowski, J. Gierczak & M. Wdowikowski</i>	369
Explicit computation of bed form roughness for operational flood modelling, a case study for the river Rhine <i>J.J. Warmink & R.M.J. Schielen</i>	375
<i>A.3 Vegetated flows</i>	
Physically and numerically modelling turbulent flow in a patchy open channel <i>O.P. Folorunso, J. Bridgeman & M. Sterling</i>	383
Diverging flow and 3-D flow structure at leading edge and in interior of submerged vegetation patch <i>T. Okamoto, M. Sanjou, S. Aoki, K. Toda & I. Nezu</i>	393

Patches in a side-by-side configuration: A description of the flow and deposition fields <i>D. Meire, J. Kondziolka & H.M. Nepf</i>	401
LES of turbulent flows in open channel with patched vegetation zones <i>S. Yokojima, Y. Kawahara & K. Matsubara</i>	409
LES of flow past a submerged circular patch of vegetation <i>W.Y. Chang, G. Constantinescu & W.F. Tsai</i>	419
Relation between sandbar mode and vegetation expansion in sand-bed river <i>Y. Toda, S.N. Kim, T. Tsujimoto & N. Sakai</i>	429
Development of coherent structure and turbulence behind a finite-length emergent vegetation patch in open-channel flow <i>T. Okamoto, M. Sanjou, S. Aoki, K. Toda & I. Nezu</i>	437
Soil in braided rivers: An overlooked component of braided river morphodynamics <i>N. Bätz, E.P. Verrecchia & S.N. Lane</i>	445
Influence of vegetated bed material on erosional patterns of meandering rivers: Preliminary experimental results <i>D. Termini</i>	453
Flow-induced uprooting of young vegetation on river bedforms <i>K. Edmaier, B. Crouzy & P. Perona</i>	461
Modelling river flow responses to weed management <i>P. Rameshwaran, A. Sutcliffe, P. Naden & G. Wharton</i>	467
Field experiments in vegetated groyne fields <i>A.N. Sukhodolov & T.A. Sukhodolova</i>	475
Effects of trees along floodplain edges on the flow structure in compound meandering channel <i>Y. Kawahara, R. Tsubaki & F.S. Nhavotso</i>	483
Flow and bedload transport in a straight compound channel with vegetation roughened floodplains <i>M. Khademishamami, M.H. Omid & J. Farhoudi</i>	491
Numerical simulation of exchange flow between open water and floating vegetation <i>M. Tsakiri & P. Prinos</i>	499
Extending the canopy flow model for natural, highly flexible macrophyte canopies <i>T.I. Marjoribanks, R.J. Hardy, S.N. Lane & D.R. Parsons</i>	509
Dynamic drag modeling of submerged aquatic vegetation canopy flows <i>T.I. Marjoribanks, R.J. Hardy, S.N. Lane & D.R. Parsons</i>	517
Reynolds stress modeling of 3-D turbulent flow in a partially vegetated open channel <i>T. Koftis, P. Prinos & C. Papakyritsis</i>	525
Measurements of drag force of cylindrical rods and trees in a river <i>K. Shiono, E. Ferreira, J.H. Chandler, R. Wackrow & T. Ishigaki</i>	535
Spatially varying stem drag forces in vegetated mixing layers <i>L. Buckman, W.S.J. Uijttewaal, W.E. Penning & J.T. Dijkstra</i>	543
Experimental assessment of riverbed sediment reinforcement by vegetation roots <i>N. Pasquale & P. Perona</i>	553
Analysis of equivalent Manning's roughness coefficient for trees vegetated on floodplain <i>K. Michioku, S. Kometani, T. Uotani, K. Kanda, Y. Irie & K. Yanagida</i>	563
Development and application of vegetation dynamics model for effective river management tasks in the Asahi River, Japan <i>K. Yoshida, S. Maeno, S. Matsuyama & S. Fujita</i>	571

Vegetation effects on vertical jet structures <i>M. Ben Meftah, D. Malcangio & M. Mossa</i>	581
A.4 Overbank flows and flood propagation	
A coupled surface-subsurface model of overbank flood flow and air entrapment in a permeable floodplain <i>D. Pokrajac & M.J.S. de Lemos</i>	591
Celerity of kinematic wave in trapezoidal channel <i>S.B. Sokolov & E.E. Egorov</i>	597
A conservative strategy to couple 1D and 2D numerical models: Application to flooding simulations <i>M. Morales-Hernández, J. Murillo, A. Lacasta, P. Brufau & P. Garcia-Navarro</i>	605
Unsteady characteristics of tsunami flow propagating over a land after overtopping seawall <i>H. Shirai & T. Hosoda</i>	615
2D shallow water GPU parallelized scheme for high resolution real-field flood simulations <i>R. Vacondio, F. Aureli, P. Mignosa & A. Dal Palù</i>	623
Analysis of depth averaged velocity in meandering compound channels <i>K.C. Patra, E. Padhi, L. Mohanty & M. Patnaik</i>	631
Prediction of energy loss along the non-prismatic reach of a compound channel using ANN <i>B. Naik, K.K. Khatua & K. Miri</i>	641
Composite roughness for rough compound channels <i>S. Pradhan & K.K. Khatua</i>	649
A.5 Interaction between river flow and structures	
Numerical simulation of turbulent flow in open channel with groynes <i>Th.I. Koutrouveli, N.Th. Fourniotis, A.C. Demetracopoulos & A.A. Dimas</i>	659
Influence of submerged groynes on turbulence and flow structure at Sawmill Creek in Ottawa, Canada <i>M.A. Ruta, C.D. Rennie, R.D. Townsend & E.C. Jamieson</i>	667
Submergence effect on flow and resistance due to a single groyne <i>A. Kadota & W.S.J. Uijttewaal</i>	675
Three-dimensional flow structures around large-scale groins on the flood plain in the Kiso River <i>T. Ito & A. Tominaga</i>	683
Water surface response to flow through bridge openings <i>S. Kara, S. Mulahasan, T. Stoesser & T.W. Sturm</i>	693
Physics of shallow recirculation zones downstream lateral expansions <i>M. Chatelain, L. Han, N. Riviere & E. Mignot</i>	701
A comparison of wood-sediment-water mixture flows at a closed type and an open type of check dams in mountain rivers <i>F. Maricar & H. Hashimoto</i>	711
Log jam formation by an obstruction in a river <i>M.I. Rusyda, H. Hashimoto & S. Ikematsu</i>	717
Contribution of riprap to local turbulence at the downstream of a low-head sill <i>C.C. Wu, Y.Y. Wu, C.Y. Tao & K.H. Wu</i>	725
Representing skewed bridge crossing on 1-D and 2-D flood propagation models: Compared analysis in practical studies <i>P. Costabile, F. Macchione, G. Petaccia & L. Natale</i>	733

Experimental investigation on the flow field around a spur dike in a 90° sharp bend <i>M. Mehraein, M. Ghodsian & S.A. Najibi</i>	743
Experimental study on the discharge released by Bric Zerbino Dam spillways <i>A. Fenocchi & G. Petaccia</i>	751
B River morphology and sediment transport	
B.1 Mechanics of sediment transport	
Particle motion of bed-load sediment moving over a smooth bed <i>J. Campagnol, F. Ballio, S.A. Hosseini Sadabadi & H. Sazadul</i>	763
Modelling the non-uniform sediment transport by means of the statistical moment approach <i>G. Rosatti, G. Garegnani & A. Armanini</i>	771
Experimental investigation on vertical size sorting using spherical glass beads <i>A.R. Dudill, P. Frey & M. Church</i>	779
Experimental study of sheet flow regime of sediment transport in a laboratory flume <i>T. Revil-Baudard, J. Chauchat, D. Hurther & E. Barthélémy</i>	785
Experiments in shear flow of granular-fluid suspension and dense mixture <i>A.M. Pellegrino, L. Schippa, E. Guazzelli & O. Pouliquen</i>	793
Effects of particle collisions on motions of mixed-size particles and bed structures <i>T. Fukuda & S. Fukuoka</i>	799
Laboratory study on transport of nonuniform bed material particles <i>M. Sajedi sabegh, M. Habibi, J. Soltani & M.M. Vafae</i>	809
Shields diagram's extension for applications in steady non-uniform flows <i>J.S.A. do Carmo</i>	815
Comparison of two models for bed load sediment transport in rivers <i>A. Paquier, B. Camenen, J. Le Coz & C. Béraud</i>	825
Numerical simulation of the sediment transport in the saltation regime <i>R. Barati, S.A.A. Salehi Neyshabouri & G. Ahmadi</i>	833
A natural-scale study of cohesive sediment transport: The Misa River case <i>M. Brocchini, A. Russo, J. Calantoni, A.H. Reed, M. Postacchini, C. Lorenzoni, S. Corvaro, A. Mancinelli, G. Moriconi & L. Soldini</i>	843
Applicability of kinematic wave approximation to shallow mud-flows with a yield stress <i>C. Gisonni, M. Iervolino, A. Vacca & C. Di Cristo</i>	851
The role of interphase forces in submerged granular flows driven by gravity <i>E. Nucci, A. Armanini & M. Larcher</i>	859
Large eddy simulation of suspended sediment transport <i>M. Dallali & V. Armenio</i>	867
Ripple formation and sediment suspension events in unsteady depth varying open channel flow <i>F. Bagherimiyab, A. Roy & U. Lemmin</i>	875
Coherent structures in open channel flows with bed load transport over an hydraulically rough bed <i>B.O. Santos, M.J. Franca & R.M.L. Ferreira</i>	883
Flow and turbulence characterization as an onset for assessing the stability of gravel beds <i>D. Duma, S. Erpicum, P. Archambeau, M. Pirotton & B. Dewals</i>	891
Sediment transport in steep channels with large roughness elements <i>T. Ghilardi, M.J. Franca & A.J. Schleiss</i>	899
Tracking bed load particles in a steep flume: Methods and results <i>J. Heyman & C. Ancey</i>	909

Intense transport of bed load in steep flume <i>V. Matoušek & J. Krupička</i>	917
Bedload particle velocity in supercritical open channel flows <i>C. Auel, I. Albayrak & R.M. Boes</i>	923
Study of sediment transport using soft computing technique <i>H. Bonakdari & I. Ebtehaj</i>	933
Reconstruction of event-related bed-load transport processes in alpine catchments—application of Tom ^{Secl} on a large spatial scale <i>B. Gems, M. Sturm, M. Aufleger & J. Neuner</i>	941
Influence of river ice break-up on stream hydraulics and sediment transport <i>S.G.A. Zare, S.A. Moore, C.D. Rennie, O. Seidou & H. Ahmari</i>	951
Analysis of suspended sediment transport data in the River Nile <i>B.A. Zaid, Ka. Koll, J.-U. Wiesemann & A.S. Elzein</i>	961
Quantification of suspended load, sinks and sources for a sediment budget of the German river Rhine <i>N. Gehres, B. Brandstetter, G. Hillebrand, S. Vollmer, K. Banhold, R.M. Frings & H. Schüttrumpf</i>	967
Non-uniform sediment input of the middle Yangtze River, China <i>H. Ge, R. Huang & L. Zhu</i>	975
B.2 River morphology and morphodynamics	
Morphodynamic differences induced by different confluence angles in widen confluences <i>S. Guillén, M.J. Franca, A.J. Schleiss & A.H. Cardoso</i>	983
Flow patterns in an open channel confluence with a small ratio of main channel to tributary discharge <i>L. Schindfessel, S. Creëlle, T. Boelens & T. De Mulder</i>	989
Effect of bed elevation discordance in the main river on the confluence hydrodynamics in 90° straight-channels' confluences <i>D. Đorđević</i>	997
Three dimensional flow field at confluent fixed-bed open channels <i>O. Birjukova, S. Guillen, F. Alegria & A.H. Cardoso</i>	1007
Numerical simulation of local tributary widening impacts on hydro-morphological processes of river confluence using CCHE2D <i>M. Rostami & S. Habibi</i>	1015
Characterization of confluences of free meander trains at the upper Amazon basin <i>R. Gutierrez, M. Choi, J. Abad & H. Montoro</i>	1025
Trapping effect of fine sediment in <i>Wando</i> <i>K. Uno, G. Tsujimoto, T. Kakinoki & N. Kazuuma</i>	1031
Sediment transport distribution along developing sand dunes <i>S. Naqshband, J.S. Ribberink, S.J.M.H. Hulscher & D. Hurther</i>	1039
Modelling time dependent flow fields over three dimensional dunes <i>R.J. Hardy, T.I. Marjoribanks, D.R. Parsons, A.J. Reesink, B. Murphy, P.J. Ashworth & J.L. Best</i>	1045
Coupled numerical simulation of flow and bed and suspended sediment transport over dunes based on the Immersed Boundary method <i>G.A. Leftheriotis & A.A. Dimas</i>	1053
Objective method for ranking bedforms with a 3-dimensionality-index <i>F. Núñez-González, D. Hesse, B. Ettmer & O. Link</i>	1059

Modelling the transition from dunes to the upper-stage plane bed <i>O.J.M. van Duin & S.J.M.H. Hulscher</i>	1067
Occurrence and characterization of bed forms at the Danube to the east of Vienna <i>M. Liedermann, P. Gmeiner, M. Tritthart, M. Glas & H. Habersack</i>	1075
Flow structure and large scale turbulence in an open channel bend of strong curvature with flat and deformed bed <i>G. Constantinescu & M. Koken</i>	1081
The wall shear velocity, u^* , in fixed and eroded beds of 180°-curved open channel flow <i>B.A. Kironoto, B.Y. Istiarto, D. Legono, Sumiadi & P.A.B. Sangging</i>	1089
Numerical modeling of dune progression in a high-amplitude meandering channel <i>A. Mendoza, D. Wang, J.D. Abad, E.J. Langendoen, P. Tassi & K. El Kadi Abderrezzak</i>	1097
2D and 3D numerical simulations of morphodynamics structures in large-amplitude meanders <i>D. Wang, P. Tassi, K. El Kadi Abderrezzak, A. Mendoza, J.D. Abad & E. Langendoen</i>	1105
Modulation of the flow structure by progressive bed forms in the Meandering Wabash River <i>J. Abad, C. Frias, K. Konsoer, J. Best, B. Rhoads, E. Langendoen & M.H. Garcia</i>	1113
Ecomorphodynamic conditions for the emergence of river anabranching patterns <i>B. Crouzy, D. Wüthrich, P. Perona & P. D'Odorico</i>	1119
Integration of a geotechnical model within a morphodynamic model to investigate river meandering processes <i>Y.Y. Rousseau, M.J. Van de Wiel & P.M. Biron</i>	1127
Numerical studies on bed variations under interactions of vegetation and bank strength <i>T. Uchida, I. Kimura, Y. Shimizu & S. Kawamura</i>	1135
Stability analysis on periodically changing of channel width <i>Y. Watanabe & K. Hasegawa</i>	1143
A diffusive 1D model for the evolution of a braided network subject to varying sediment supply <i>M. Redolfi & M. Tubino</i>	1153
Morphodynamic modelling of a tortuous meandering clay bed river using Delft3D: Stillwater Creek, Ottawa <i>P. Parsapour-Moghaddam & C.D. Rennie</i>	1163
Variation of the bankfull area in a braided reach of the LYR over the past 30 years <i>X.J. Li, J.Q. Xia & J. Li</i>	1173
Sediment transport and bedform development in the lee of bars: Evidence from fixed- and partially-fixed bed experiments <i>A.J.H. Reesink, D.R. Parsons & R.E. Thomas</i>	1179
Characteristics of subsurface water flow influenced by formation process of gravel bar <i>M. Obana, T. Chibana & T. Tsujimoto</i>	1187
A new equation for alternate bar length <i>A.A. Boraey & A.M. Ferreira da Silva</i>	1195
Spatial distribution of porosity of bed material, bed strength and size distribution of bed material on bars <i>H. Takebayashi, M. Fujita, R. Kamito & Y. Samoto</i>	1203
Morphodynamics of alternate bars in the Alpine Rhine River: Methods for the applicability of mathematical models using fields observations <i>L. Adami & W. Bertoldi & G. Zolezzi</i>	1213
Modelling river bed form dynamics: Large scale application <i>S. Giri, S. Yamaguchi, M. Nabi & Y. Shimizu</i>	1221

Sensitivity of morphodynamic simulations due to input variability—implications on sedigraph estimations due to limited data <i>S. Jocham, R. Klar, S. Achleitner & M. Aufleger</i>	1231
Numerical modelling of morpho-dynamic processes with multi-thread flows <i>J. Sun, B. Lin & H. Yang</i>	1239
Numerical simulation for bed aggradations due to sediment overloading in alluvial channels <i>A.L. Qureshi & A. Baloch</i>	1245
Multi-scale modelling of river morphodynamics <i>M. Nabi, S. Giri, T. Iwasaki, I. Kimura & Y. Shimizu</i>	1253
Recovering Elder's equation: A new view on river morphology <i>A.J. Constain, D.J.M. Fernández, J.L.C. Rivera & C.A. Peña-Guzmán</i>	1261
Temporal bed adjustments to a series of water pulses in gravel bed rivers <i>C. Ferrer-Boix & M.A. Hassan</i>	1269
River morphological evolution in earthquake-hit region: Effects of floods and pulsed sediment supply <i>C.G. An, X.D. Fu & G. Parker</i>	1275
Sediment transport, sorting and three-dimensional flow patterns in pool-riffle sequences: Implications for self-maintenance <i>E. Bayat, J.F. Rodríguez, G.A.M. de Almeida & P. Saco</i>	1283
River rejuvenation for a sediment-laden torrent from the viewpoint of river morphology <i>C.C. Wu & P.H. Wang</i>	1289
Quasi-stable channel morphology in response to hydromodification <i>B.D. Plumb & W.K. Annable</i>	1297
Simulation of local river widenings—a matter of 1D or 2D modelling? <i>Th. Berchtold, V. Weitbrecht, D. Vetsch & R.M. Boes</i>	1305
Analysis of morphological changes in rivers <i>M. Gharbi, A. Soualmia, D. Dartus & L. Masbernat</i>	1315
Comparison of morphological predictions in the Lower Rhine River by means of a 2-D and 3-D model and in situ measurements <i>L. Backhaus, T. Brudy-Zippelius, T. Wenka & J. Riesterer</i>	1323
Analysis of the Solís Chico river mouth migration <i>C. Cheties, S. Solari, G. López & L. Teixeira</i>	1331
Analysis of the estuarine sediment of the Taimali River in Taiwan <i>Wei-Po Huang, John Z. Yim & Yi Jiun Liao</i>	1337
The effect of potential discharges on the stability of the Rosetta promontory, Egypt <i>A. Masria, M. Iskander, A. Negm & O.C. Saavedra</i>	1345
B.3 Local scour and erosion processes	
Clear water scouring around bridge piers and the phenomenological theory of turbulence <i>C. Manes</i>	1357
Local scour at bridge piers founded in coarse-bed streams <i>D.C. Froehlich</i>	1365
Spatiotemporal changes in bed elevations with turbulence around submerged cylinders embedded in sand beds <i>B.S. Mazumder, K. Sarkar & C. Chakraborty</i>	1373
Temporal evolution of live-bed pier scour <i>J.H. Hong, H.W. Wang, Y.C. Wang, S.C. Li & Y.M. Chiew</i>	1381

Local scour at a cylindrical bridge pier under a flood hydrograph <i>S.A. Salamatian, M. Karimae Tabarestani & A.R. Zarrati</i>	1387
Experimental and computational study of local scour pool around finite patches of vegetation <i>H.S. Kim, I. Kimura & Y. Shimizu</i>	1393
A preliminary study on scour at submerged weirs in live bed conditions <i>D. Guan, B.W. Melville & H. Friedrich</i>	1401
Experimental and numerical study of the scour process around a slit weir <i>K. Ota & T. Sato</i>	1407
An experimental and numerical study on the spatial and temporal evolution of a scour hole downstream of a rigid bed <i>G. Dodaro, A. Tafarajnoruz, F. Calomino, R. Gaudio, F. Stefanucci, C. Adduce & G. Sciortino</i>	1415
Equilibrium scour hole downstream of an apron: A model <i>A. Sarkar</i>	1423
Numerical modeling on response of fluvial geomorphology to weir removal <i>S.N. Kim, Y. Toda & T. Tsujimoto</i>	1429
The dynamic of streams equipped with Check Dams <i>G. Piton & A. Recking</i>	1437
Influence of a single submerged groyne on the bed morphology and the flow field <i>R. Möws & Ka. Koll</i>	1447
Laboratory analysis of armor layer development in a local scour around a groin <i>G.T. Török, S. Baranya, N. Rütther & S. Spiller</i>	1455
Riverbed layering impact on scour at the abutments <i>B. Gjunsburgs, E. Govsha & G. Jaudzems</i>	1463
Spatial and temporal variations in bed morphology at river contractions <i>G. Oliveto & M.C. Marino</i>	1469
Location of the maximum scouring depth at the outlet of partially-blocked and non-blocked box culvert <i>S. Sorourian, A. Keshavarzi, J. Ball & B. Samali</i>	1475
Investigation of the effective parameters sensitivity with respect to both shear and beam-type failures in overhanging riverbanks <i>A. Samadi, E. Amiri-Tokaldany & S.E. Darby</i>	1481
Experimental study of cantilevered riverbank stability <i>E. Amiri-Tokaldany, A. Samadi & M.H. Davoudi</i>	1491
Flow structure and bed deformation around a sphere on movable bed <i>A. Tominaga</i>	1499
Scour on alluvial bed downstream of falling jets <i>V. Fiorotto, E. Caroni & S. Calligaris</i>	1509
Clear-water bridge scour under triangular-shaped hydrographs with different peak discharges <i>G. Bombar</i>	1519
Verification of equation for non-deposition sediment transport in flood water canals <i>H. Bonakdari & I. Ebtehaj</i>	1527
Scour development caused by propeller jet of moving vessels <i>P. Geisenhainer & Ka. Koll</i>	1535
Application and validation of sediment erosion models to time dependent wall shear stresses around a wall-mounted circular cylinder <i>W. Schanderl, O. Chmiel, P. Huttner, S. Zischkale & M. Manhart</i>	1545

Influence of pore pressure on clay erosion <i>H.S. Salem, C.D. Rennie & C.Z. Custodio</i>	1553
Bank retreat at typical cross-sections in the Jingjiang Reach due to the operation of TGP <i>J.Q. Xia, Q.L. Zong, Y. Zhang & Q.X. Xu</i>	1561
Instream river training: Fundamentals and practical example <i>N. Werdenberg, M. Mende & C. Sindelar</i>	1571
B.4 Geomorphic unsteady flows	
Numerical simulation of snow avalanches as a Bingham fluid flow using SPH method <i>A.M. Abdelrazek, I. Kimura & Y. Shimizu</i>	1581
Debris flow monitoring in the French Alps <i>C. Bel, F. Liébault, H. Bellot, F. Fontaine, D. Laigle & O. Navratil</i>	1589
Unsteady 2D flow over mobile bed with variable density <i>C. Juez, J. Murillo & P. Garcia-Navarro</i>	1597
Hydro-morphologic modelling for different calamitous scenarios in a mountain stream <i>A. Radice & S.M. Elsayed</i>	1603
Modelling bedload transport for mixed flows in presence of a non-erodible bed layer <i>G. Corestein, E. Bladé & D. Niñerola</i>	1611
The response of bed-load sediment transport and bed evolution under unsteady hydrograph flows <i>L. Wang, A. Cuthbertson, G. Pender & Z. Cao</i>	1619
Morphological changes in River Nile at Bani-Sweif for probable flood flow releases <i>A.S. Foda & A.M.A. Sattar</i>	1629
B.5 Dyke and dam erosion	
Laboratory experiments on dam-break flow of water-sediment mixtures <i>Y. Ozeren, R. Aleixo, M. Altinakar & D. Wren</i>	1639
Spatial dike breach: Accuracy of photogrammetric measurement system <i>P.-J. Frank & W.H. Hager</i>	1647
Mechanism of embankment dam breach <i>D. Verma, B. Setia & V.K. Arora</i>	1655
Dike erosion due to a sudden-wave overtopping: Preliminary results <i>S. Evangelista, A. Leopardi & M. Mingarelli</i>	1661
Limitations of the shallow water assumptions for problems involving steep slopes: Application to a dike overtopping test case <i>S. Van Emelen, Y. Zech & S. Soares-Frazão</i>	1669
Numerical simulation of a dam-break with a wide range of shields parameter <i>C. Di Cristo, S. Evangelista, A. Leopardi, M. Greco & M. Iervolino</i>	1679
Tailings dam-break flow analysis by means of a combined PIV-PTV tool <i>R. Aleixo, Y. Ozeren & M. Altinakar</i>	1689
One-dimensional and two-dimensional hydraulic-numerical modeling of dam break waves <i>A. Bornschein</i>	1699
C River engineering and restoration	
C.1 Flow management and flood control	
Floods in the Guadalquivir river (Southern Spain) <i>P. Bohorquez, V. Aranda, J. Calero, F. García-García, P.A. Ruiz-Ortiz, T. Fernández & C. Salazar</i>	1711

A mobile bed 1D numerical model to support Red River (VietNam) basin management <i>D. Bernardi & L. Schippa</i>	1721
Unraveling the contribution of wind, sea level and discharge to design water levels in the Dutch delta <i>R.M.J. Schielen, A. Bomers & D. Kroekenstoel</i>	1729
Hydrodynamics of Ribarroja Reservoir (Ebro River, Spain): Water temperature, water velocities and water age <i>M. Arbat-Bofill, M. Sánchez-Juny, E. Bladé, D. Niñerola, J. Dolz & A. Palau</i>	1737
The numerical investigation of the effect of subsequent check dams on flood peaks and the time of concentration using the MIKE 11 modeling system (Case study: Golabdareh catchment, Iran) <i>P.H. Namadi, B. Saghafian & M. Rostami</i>	1745
Flood disaster and training of River Ganga and its two tributaries in India—some case study <i>S.K. Mazumder & K.N. Keshri</i>	1751
The Bisagno River diversion <i>M. Ferrari, M. Belicchi, D. Cerlini, U. Majone, S. Venturini, A. Marchi, A. Galli, U. Galli & S. Pinasco</i>	1757
Applying river stage forecasting for early inundation warning <i>M.-H. Hsu, J.-C. Fu & W.-H. Teng</i>	1767
The “Isère Amont” project: 16 expanding flood areas along the river <i>O. Manin, A. Le Peillet & L. Boutonnier</i>	1777
Semi-automatic conceptual model identification and calibration tool for river hydraulic computations <i>V. Wolfs, P. Meert & P. Willems</i>	1783
New computation method for flood flows and bed variations in a low-lying river with complex river systems <i>K. Tabata & S. Fukuoka</i>	1791
Lateral flood discharge at rivers: Concepts and challenges <i>M. Bühlmann & R.M. Boes</i>	1799
Mitigation measures for unsteady flow effects on riverbeds during hydropower peaking <i>S. Spiller, N. Rüther & H. Friedrich</i>	1807
A study on selection of probability distributions for at-site flood frequency analysis in Mahanadi river basin, India <i>N. Guru & R. Jha</i>	1813
Iowa watersheds project: Planning and assessment of flood reduction strategies in agricultural watersheds <i>N.W. Thomas, L.J. Weber & N.C. Young</i>	1821
Freeboard allowance at rivers—experiences from Germany <i>R. Pohl</i>	1829
Managing materials across the Isere river and “Isere Amont” works <i>O. Manin, J.-F. Frezet & L. Boutonnier</i>	1837
Large wood dynamics in a wide mountain river: The Czarny Dunajec, Polish Carpathians <i>V. Ruiz-Villanueva, M. Stoffel, B. Wyzga, P. Mikuś & Z.W. Kundzewicz</i>	1843
Effect of Black Hole Dams in the Eastern Nile River Basin: Changes in water quantity and quality of downstream countries <i>S.A. Kantoush</i>	1849

C.2 Risk mitigation and assessment in river basins

- One-dimensional flood inundation modeling and sediment transport characterization for a potential mining site in southern Virginia, USA 1859
C.F. Castro-Bolinaga & P. Diplas
- Site selection for sand and gravel mining using an integrated GIS/MCDM approach 1867
A. Effati, A.M. Malek, S. Seyf & A. Karaji
- The Romanche Séchilienne project, an integrated approach to river development 1873
M. Grenier, T. Monier & C. Moiroud
- Sediment management measures for river restoration and flood protection in alpine valleys 1881
B. Roquier, J. Dubois & J.-L. Boillat
- Estimating the combined effect of flood mitigation measures 1889
F. Huthoff, J. Udo, H. Barneveld, M. Bakker & N. Asselman
- PMP-PMF and their occurrence probability in alpine region by 2-3D modelling 1897
J.A. Hertig, R.G. Receanu & J.M. Fallot

C.3 Flow monitoring and remote sensing methods

- Bedload grain size estimation from the indirect monitoring of bedload transport with Swiss plate geophones at the Erlenbach stream 1907
C.R. Wyss, D. Rickenmann, B. Fritschi, J.M. Turowski, V. Weitbrecht & R.M. Boes
- Deriving formulas for gravel transport velocity from tracer measurements 1913
M. Klösch & H. Habersack
- Monitoring of sediment transport processes for determining future trends 1921
J. Schneider, M. Redtenbacher, G. Harb, O. Sass, J. Stangl, A. Gobiet, G. Heinrich & S. Tani
- Gravity wave effects on the calibration uncertainty of hydrometric current meters 1929
M.A. de Huu & B. Wüthrich
- Remote monitoring of volumetric discharge based on surface mean and turbulent metrics 1935
E. Johnson & E. Cowen
- Acoustic sediment flux observations on the Fraser River, Canada 1943
D.W. Haught, J.G. Venditti & M. Church
- A quality analysis of the Vectrino II instrument using a new open-source MATLAB toolbox and 2D ARMA models to detect and replace spikes 1951
B. MacVicar, S. Dilling, J. Lacey & K. Hipel
- Image-based velocity and discharge measurements in field and laboratory river engineering studies using the free Fudaa-LSPIV software 1961
J. Le Coz, M. Jodeau, A. Hauet, B. Marchand & R. Le Boursicaud
- Evaluation of 2D river flow simulation with the aid of image-based field velocity measurement techniques 1969
I. Fujita, G. Kumano & K. Asami
- Three dimensional flow analyses for accuracy estimation of floats flow measurement 1979
A. Kadota & S. Okada
- Operational river velocity surveillance at whole reach-scale by implementing time-of-arrival algorithms on upstream-downstream conductivity signals 1987
D. Petrovic, I. Vulpe, J.-P. Vanderborght & M.A. Verbanck
- Using airborne hydromapping to study an alpine torrent 1995
W. Dobler, R. Baran, F. Steinbacher, M. Ritter & M. Aufleger

Helicopter-based surface PIV experiments at Thur River <i>M. Detert & V. Weitbrecht</i>	2003
Wetted width of Norwegian rivers—results of a pilot study <i>P. Zinke & C. Carnerero</i>	2009
Stream temperature forecasting by means of ensemble of neural networks: Importance of input variables and ensemble size <i>M.J. Napiorkowski, A.P. Piotrowski & J.J. Napiorkowski</i>	2017
Decomposition of a cloud of gaugings into hydraulically homogeneous families for the tracing of the rating curves by using existing segmentation procedures <i>T. Morlot, C. Perret & A.-C. Favre</i>	2027
Harmonizing water and energy, available tools from the AIM Alpine Space in Movement project <i>M.A. Peviani, A. Danelli & M. Cesca</i>	2037
C.4 Protection against local scour and erosion	
Studies on the effect of an upstream pier as a scour protection measure of a downstream bridge pier <i>S.K. Khaple, P.R. Hanmaiahgari & S. Dey</i>	2047
Application of collars as scour countermeasure at various contraction ratios caused by two spill through abutments <i>M. Koken, M. Gogus & K. Yilmaz</i>	2053
Designing rock riprap falling aprons to protect bridge piers and abutments <i>D.C. Froehlich</i>	2059
Effect of compressed riprap thickness on the stability of river banks <i>M. Jafarnejad, M.J. Franca, M. Pfister & A.J. Schleiss</i>	2069
Predicting stable river bank angle after planar mass failure <i>E.A. Tokaldany, M. Rezaie-Mayani & M.H. Davoudi</i>	2075
Experimental assessment of scouring and deposition processes around arrays of permeable gabion groynes <i>M. Romero, N. Ballesteros & V. Lucana</i>	2083
Scour characteristics downstream of grade-control structures <i>S. Pagliara & S.M. Kurdistani</i>	2093
Experimental estimation of rockfill protection downstream stilling basins <i>R.A. Lopardo</i>	2099
Evaluation of scour downstream of riprap aprons on low-head ogee spillways <i>C. Biering, S.H. Hong, T. Sturm, K.S. Yoon & J.A. Gonzalez-Castro</i>	2105
Effect of riprap protection in controlling local scour at the toe of a ground sill <i>C.-C. Wu, P.C. Huang, W.L. Liao, Y.C. Chung & T.S. Hsu</i>	2111
Sediment transport and morphodynamics in an urbanized river: The effect of restoration on sediment fluxes <i>M. Chapuis, V. Bevan, B. MacVicar & A.G. Roy</i>	2119
River management with submerged vanes <i>A.J. Odgaard</i>	2127
Development and implementation of a fish-friendly river bed stabilization <i>U. Stephan, M. Hengl & M. Manser</i>	2135
River stabilization with groynes in the Western Cape, South Africa <i>H.E. King</i>	2145
Experimental study on effects of grain size in failure process of rubble mound spur-dike under submerged conditions <i>H. Haghazadeh, R. Sadeghi, S.A.A. Salehi Neyshabouri & M. Ghodsian</i>	2151

Study of the effect of triangular vane on bed topography in a 90° mild bend <i>M. Shafai-Bejestan & M.B. Yarahmadi</i>	2157
<i>C.5 Physical and numerical modelling in river engineering</i>	
Experimental measurements of flow and sediment transport through bottom racks— influence of gravels sizes on the rack <i>L.G. Castillo, J.T. García & J.M. Carrillo</i>	2165
Experimental parametric study of energy dissipater design in natural rivers <i>Z. Vecsernyés, M. Destrieux, N. Andreini & J.-L. Boillat</i>	2173
Calibration of the physical reduced scale model of Xingu River bed for a study of Belo Monte Hydroelectric Plant <i>F.R. Terabe, J.R.M. Almeida, J.J. Ota, I.I. Müller, G.D. Goretti, J.C. de F. Guimarães & C.R. Vareta</i>	2181
A simple physically-based model for predicting sand transport dynamics in the Lower Mekong River <i>B. Camenen, J. Le Coz, G. Dramais, C. Peteuil, T. Fretaud, A. Falgon, P. Dussouillez & S.A. Moore</i>	2189
Mean flow structures and control for suitable bed morphology around successive groynes <i>A. Kadota & C. Asayama</i>	2199
Implicit finite volume solution of the bidimensional Shallow Water Equations in unstructured meshes: Application to river flow <i>J.M. Martí & F.A. Sánchez</i>	2207
Investigating grid-size dependency in coupled surface-subsurface hydraulics <i>K. Shaad & P. Burlando</i>	2215
Variable-grid numerical model for river closure <i>F. Yongyang, Z. Wei, L. Lin, L. Ming & Z. Ming.</i>	2225
How to determine the erosion risk of contaminated cohesive sediments best? Putting <i>in situ</i> and laboratory practices to the test <i>M. Noack, S.U. Gerbersdorf, S. Wieprecht, G. Hillebrand & P. Kasimir</i>	2235
A Matlab framework for mathematical modeling in geosciences <i>N. Zimmermann, S. Buitrago, C. Gullentops & J. Blanckaert</i>	2243
Spreadsheet tools for river evaluation, assessment and monitoring <i>D. Mecklenburg, A. Ward, J. Witter & J. D'Ambrosio</i>	2251
Evaluation of water intake location suitability using hydrodynamic modeling <i>A.M. Elmoustafa</i>	2259
Two-dimensional modeling of multi-grain sediment transport in extreme events <i>D. Farshi, D. Job, J. Trösch & B. Faust</i>	2267
Simulation of bedload transport in the Hasliaare River with increased sediment input <i>D. Rickenmann, F.U.M. Heimann, J.M. Turowski, C. Bieler, M. Böckli & A. Badoux</i>	2273
Reactivation of Klingnau reservoir sidearm: Numerical simulation of sediment release downstream <i>A. Amini, P. Heller, G. De Cesare, A.J. Schleiss, N. Kräuchi & P. Rötheli</i>	2283
Variation of river flow due to the 2011 Tohoku Tsunami <i>M. Roh, M.B. Adityawan & H. Tanaka</i>	2289
The influence of flood sequencing on the morphology and bed composition of the American River, California, USA <i>D. Pender, H. Haynes, G. Pender & A. Shvidchenko</i>	2297

Effects of large-scale rubber farm on soil erosion and river bed material in the upper Mekong Basin <i>X. Zhou, Z. Wang, B. Yu & L. Seitz</i>	2305
 C.6 River habitat management	
Habitat numerical modelling to assess fish shelter design under hydropeaking conditions <i>R.Z. Almeida, I. Boavida & A.N. Pinheiro</i>	2315
Enhancement of habitat heterogeneity by placement of boulders in streams <i>A. Hamuy-Blanco & C.S. James</i>	2321
Relationship between scenery of flow ecology habitat and physical environment <i>R. Lopa & Y. Shimatani</i>	2331
Spatiotemporal patterns of geomorphological processes determine characteristics of riverine habitat heterogeneity <i>M. Hyodo, Y. Takemon & T. Sumi</i>	2339
Macquarie River floodplain flow modeling: Implications for ecogeomorphology <i>S.G. Sandi Rojas, J.F. Rodríguez, P. Saco, G. Riccardi, L. Wen, N. Saintilan, H. Stenta, F. Trivisonno & P.A. Basile</i>	2347
Impacts by dams: From water quality modelling to management optimization <i>M.J. Kunz & A. Wüest</i>	2357
Research on aquatic ecology in the Naban River and restoration suggestions <i>N. Zhao, Z. Y. Wang, M.Z. Xu, L.J. Han & X.D. Zhou</i>	2363
Creek restoration on an industrial site in southern Québec, Canada <i>N. Stämpfli, T. Winhold & P. Groleau</i>	2371
Water holding capacity and runoff load at the Anmon River in the Shirakami-Sanchi World Heritage Site <i>A. Marui, A. Kudo, M. Izumi & E. Kurashima</i>	2381
Habitat restoration in an urban channel—experiences from monitoring of a pilot action <i>R. Mohn, N. Vosswinkel, M. Göke & H.W. Riss</i>	2389
Morphodynamics restoration of the Old Rhine through controlled bank erosion: Concept, laboratory modeling, and field testing and first results on a pilot site <i>D. Aelbrecht, A. Clutier, A. Barillier, K. Pinte, K. El-Kadi-Abderrezzak, A. Die-Moran, F. Lebert & A. Garnier</i>	2397
Study effects of river locks on Karoon and Bahmanshir Rivers to control salinity intrusion and developing of Abadan region in Iran <i>M. Daliry</i>	2405
The recovery of water temperature and Dissolved Oxygen in the downstream river of a stratified reservoir: A field investigation and experiment <i>C. Zhang, Z. Wang, N. Zhao, Z. Li & W. Li</i>	2411
 C.7 Eco-hydraulics	
Analysis of flow patterns in vertical slot fishways <i>M. Musall, C. Schmitz, P. Oberle, F. Nestmann, M. Henning & R. Weichert</i>	2421
Refurbishing an old fish pass: Physical and numerical modeling <i>D. Bousmar, G. Zorzan, A. Gillet, J. Lopez Delhoule, A. Bagnée & J.C. De Greef</i>	2427
Meander-type fish pass—construction systems, hydraulic characteristics and functionality <i>J. Stamm, U. Helbig & C. Schulz</i>	2437
Hydraulic modeling of nature-oriented fishways and fluvial structures <i>R. Czerny, P. Oberle & F. Nestmann</i>	2445

An ecological and engineering view on unstructured block ramps <i>S. Tamagni, V. Weitbrecht & R. Boes</i>	2453
Temporal and spatial hydrodynamic variability in a gravel-bed river: Measurement, characterization, and significance for spawning salmonids at the riffle scale <i>V.G. Lounder & W.K. Annable</i>	2461
Simulating High-Flow Effects (HFE) on river deformation and rainbow trout (<i>Oncorhynchus mykiss</i>) habitat <i>W. Yao, S. Bamal & P. Rutschmann</i>	2471
Simulating dam effects on river deformation and rainbow trout (<i>Oncorhynchus mykiss</i>) population number <i>W. Yao, V. Kumar & P. Rutschmann</i>	2477
The temporal variability of hydraulic variables depending on morphology <i>M. Paternolli & W. Gostner</i>	2485
Effects of large wood on morphology, flow and turbulence in a Lowland River <i>K. Blanckaert, R. Han, F. Pilotto & M. Pusch</i>	2493
Wood density assessment to improve understanding of large wood buoyancy in rivers <i>V. Ruiz-Villanueva, M. Stoffel, H. Piégay, V. Gaertner & F. Perret</i>	2503
C.8 Navigation waterways	
Connecting a tributary stream into the Canal du Centre thanks to a settling basin in Obourg, Belgium <i>C. Swartenbroeckx & D. Bousmar</i>	2511
An integral feasibility study of a new weir in the Lower Rhine <i>H.G. Tuin, H.G. Voortman, R.A.J. van de Kamp, W. Seinen, J.K. Vrijling & A. van der Toorn</i>	2519
Research on navigation-obstruction with complex boundary and its counter measures in middle reaches of the Yangtze River <i>A. Pengsongbo, B. Liulin, C. Huangchengtao & D. Liufengyang</i>	2527
Assessment of the function of engineering measures to improve the navigability of the Danube—a comparison between different modelling approaches <i>Y. Huismans, M.F.M. Yossef & G. Deák</i>	2533
Research on the normal water level and its effect on waterway condition in the cascade navigation-power junction <i>X. Feng & Y. Li</i>	2543

Preface

Nature is not to be trifled with, she is always true, always earnest, always severe; she is always right, and the faults and errors are always those of man (Goethe).

Hydraulic engineers responsible for the planning of river training and restoration works should bear well in mind this quotation from Goethe. Reliable and sustainable protection against floods can only be assured by hydraulic structures that preserve the natural character of a watercourse. Accordingly, modern river engineering must take a river's natural forces and behaviour into account. For example, attempts to straighten a meander that has developed naturally may be dangerous: in extreme flood conditions, if not earlier, the apparently tamed river will recall and reoccupy the space to which it is entitled.

The world is like a river, running along in its bed, this way and that, forming sandbanks by chance and then being forced by these to take a different course. Whereas this all proceeds smoothly and easily and gradually, the river engineers have great difficulties when they seek to counteract this natural behaviour (Goethe).

Goethe (once again) recognized that the dynamics of a river can only be controlled to a limited extent by channel modifications and rigid river training works. The term “dynamics” refers to variations in hydromorphology over space and time due to flood discharges and sediment transport. These processes regularly lead to the destruction of habitats, especially in riparian areas, and the creation of space for new habitats. Dynamic watercourses require a considerable amount of space. For example, naturally meandering rivers may migrate laterally within a belt of roughly five to six times the width of the channel bed. In the valleys of the Alps and Pre-Alps, rivers originally required the entire valley floor.

As well as providing flood protection, watercourse alterations carried out over the last two centuries were designed to reclaim land for development and agriculture. Efforts were thus made to impede the dynamics: rivers and streams were channelized, and channel bed widths were optimized with regard to sediment transport. This resulted in monotonous watercourses, with almost no variation in hydraulic or morphological characteristics.

Today's challenge for river engineers, in close collaboration with environmental and ecological scientists, is to restore the channelized river under the constraints of high urbanization and limited space. The behaviour of river systems is a result of the complex interaction between flow, sediments, morphology and biota. Furthermore rivers are often used as a source for water supply and energy production as well as a waterway for transportation.

During the 7th International Conference on Fluvial Hydraulics “River Flow 2014” at École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, scientists and professionals from all over the world addressed these challenges and exchanged their knowledge regarding fluvial hydraulics and river morphology. Past conferences, as well as the current one, organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR), witnessed a significant increase in participation of our community of river engineers and researchers, confirming the need for such a forum.

The Local Organizing Committee of River Flow has received more than 650 abstracts, of which more than 630 were aligned with the conference's topics. Subsequently, 410 papers were submitted by engineers and researchers. The International Scientific Committee has finally selected 343 contributions (from authors originating from 43 countries) to be included in the Proceedings and in the separate book documenting the special session on Reservoir Sedimentation. Of these about 2/3 were considered for long oral presentation (15 minutes) and 1/3 were selected for short presentation (3 minutes) and poster. The overall very high quality of the contributions demonstrates the dynamism of the scientific and professional community working on fluvial hydraulics.

A traditional distinctive feature of River Flow conferences has been the organisation of Master Classes the day before the formal opening of the conference. Master Classes present a unique opportunity for PhD and MSc students and young researchers to address their research with renowned senior scientists,

meet peers working on similar topics and identify possible collaborations for the continuation of their work. At River Flow 2014 six Master Classes were conducted by 13 masters, enrolling 65 students from 15 countries. This confirms the vitality of the fluvial hydraulics community contributing to ensure the sustainability of IAHR.

Prof. Dr. Anton J. Schleiss, *Conference Chairman*
Dr. Giovanni De Cesare, *Co-Chairman*
Dr. Mário J. Franca, *Co-Chairman*
Dr. Michael Pfister, *Co-Chairman*

Acknowledgements

The success of a conference depends above all on the quality of the contributions of the participants. We are therefore grateful to all researchers and practitioners working in the river-related disciplines who made such a large number of contributions to River Flow 2014. The International Scientific Committee verified the pleasingly high quality of the submitted contributions when performing an in-depth review of the manuscripts. We are very grateful to its members for their excellent review work, rare in conferences, despite the limited time available. A major concern of the River Flow conferences is to attract young researchers. In this light we specially thank all students that applied to the Master Classes as well as all Masters who accepted the invitation to lecture in our conference and who attracted so many students.

A conference, involving numerous students at a reduced fees, can only be financially viable with some significant level of sponsorship. We acknowledge the support of the Swiss Federal Office for the Environment, BG Consulting Engineers, and Hydro Exploitation SA as gold sponsors for the proceedings and the conference. The existence of numerous Master Classes and the need to cover the expenses of distinguished Masters was only possible with the support of Swiss National Science Foundation (SNSF). Finally, further support to the Conference was given by the silver sponsors e-dric.ch, IM & IUB Engineering, Basler & Hofmann, AquaVision Engineering, and Met-Flow SA.

River Flow 2014 benefits from the experience of the organizers of previous editions and we thank them for the fruitful advices. The success of River Flow is a result of the excellent teamwork within the LOC supported by all staff of the Laboratory of Hydraulic Constructions (LCH), who invested considerable time during two years for the preparation of the conference. A special thanks goes to the conference secretariat ensured by Mrs. Scarlett Monnin and Mr. Gesualdo Casciana.

Finally the involvement of IAHR and the Committee on Fluvial Hydraulics was fundamental for the divulgation of the conference; and for their efforts we express our gratitude.

The Local Organizing Committee of River Flow 2014

MEMBERS OF THE IAHR COMMITTEE ON FLUVIAL HYDRAULICS

Andreas Dittrich, *Technical University of Braunschweig, Germany, Chair*
Jose Rodríguez, *The University of Newcastle, Australia, Vice Chair*
Mustafa Altınakar, *The University of Mississippi, USA, Past Chair*
André Paquier, *Irstea, France, Member*
Sandra Soares-Frazão, *Université Catholique de Louvain, Belgium, Member*
Subhasish Dey, *Indian Institute of Technology, India, Member*

Angelo Leopardi, *Università Degli Studi Di Cassino E Del Lazio Meridionale, Italy, Member*
Shaohua Marko Hsu, *Feng Chia University, Taiwan, Member*
Rui M.L. Ferreira, *Instituto Superior Técnico, Portugal, Co-opted member*
George Constantinescu, *University of Iowa, USA, Co-opted member*
Mário J. Franca, *École Polytechnique Fédérale de Lausanne, Switzerland, Co-opted member*

MEMBERS OF THE LOCAL ORGANIZING COMMITTEE

Anton J. Schleiss, *EPFL, Conference Chairman*
Giovanni De Cesare, *EPFL, Co-Chairman*
Mário J. Franca, *EPFL, Co-Chairman*
Michael Pfister, *EPFL, Co-Chairman*
Scarlett Monnin, *EPFL, Secretary*
Gesualdo Casciana, *EPFL, Secretary*

River Flow 2014

International Conference on Fluvial Hydraulics

The behaviour of river systems is a result of the complex interaction between flow, sediments, morphology and habitats. Furthermore, rivers are often used as a source of water supply and energy production as well as a waterway for transportation. The main challenge faced by river engineers today, in collaboration with environmental and ecological scientists, is to restore the channelized rivers under the constraints of high urbanization and limited space, as well as sustainable water use.

During the seventh International Conference on Fluvial Hydraulics "River Flow 2014" at École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, scientists and professionals from all over the world addressed this challenge and exchanged their knowledge regarding fluvial hydraulics and river morphology. This book comprises the proceedings of the high quality contributions of the participants, which reflect the state-of-the-art in the fields of river hydrodynamics, morphodynamics, sediment transport, river engineering and restoration. The conference was organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). Past River Flow conferences have witnessed a significant increase in participation of our community of river engineers and researchers, confirming the need for such a forum.
